

# Moringa oleifera moringa

Moringa is a perennial but not long-lasting tree that at most can live 20 years. It's kind of a very fast growth.

Provides a high amount of nutrients to the soil in addition to protecting it from external factors such as erosion, dewatering and high temperatures.

## GEOGRAPHICAL DISTRIBUTION

### MAP OF PERU

In Peru are explored new areas of sowing.

## MODES OF USE

## SUBMISSIONS OF GRADERI S.A.C.

## HEALTH BENEFITS

- **LEAVES:** Can be used as a poultice in the wounds, to minimize headaches (rub them on the temples), hemorrhoids, fever, sore throat, bronchitis, optical and ocular infections, scurvy and catarrh; The juice of the leaves controls the levels of glucose and reduces the glandular inflammation.

- **SEEDS:** The extract of the seeds exerts its protective effect, decreases the lipid peroxides of the liver.
